

Virginia Quality Standards

Virginia's Quality Rating and Improvement System (QRIS) awards quality levels to child care and preschool programs based on these four nationally recognized quality standards and best practices.

EDUCATION & QUALIFICATIONS

A teacher's formal education in child development or early childhood education has an impact on children's school readiness. When teachers have some formal education, such as a Child Development Associate (CDA), professional certificate, or child-related college credits, they are more prepared to intentionally support children's learning through high quality interactions. This standard measures the education and qualifications of program staff.

CURRICULUM & ASSESSMENT

Intentional teaching has an impact on children's school readiness. This standard does not require programs to use a purchased curriculum. Instead, this standard measures how programs intentionally promote children's learning and development. Virginia has developed the Milestones of Child Development and the Foundation Blocks for Early Learning to guide early childhood educators in promoting school readiness, and this standard considers how the program aligns with Virginia's early learning guidelines.

ENVIRONMENT

Children engaged in meaningful learning and play, guided by qualified caregivers in an enriched educational environment, has an impact on school readiness. This standard measures the types of materials available to the children and the types of activities they are involved in throughout the day.

INTERACTIONS

Interactions between teachers and children form the foundation for all social and cognitive learning, significantly impacting school readiness. In addition to exposure to high quality materials and intentional teaching, children benefit most when they experience high quality interactions. At your program, do teachers

- support children's social and emotional growth?
- have a positive attitude towards the children?
- use constructive behavior management techniques?
- encourage children to learn and be creative?

This standard measures the quality of interactions.
